Computer Science undergraduate with a strong foundation in **Machine Learning, Computer Vision, Data Science, and Data Structures & Algorithms**, experienced in building real-time AI systems, full-stack applications, and scalable data-driven solutions.

EDUCATION

Graphic Era Deemed to be University <i>B.Tech in Computer Science & Engineering CGPA: 8.0/10</i>	2023 – 2027
City Montessori School <i>Senior Secondary (Class XII) 85.4%</i>	2021 – 2022
City Montessori School <i>Secondary (Class X) 84.5%</i>	2019 – 2020

TECHNICAL SKILLS

Languages: C++, Python, C, JavaScript, Java, SQL
Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Software Engineering
Machine Learning: TensorFlow, Keras, Deep Learning, CNN, Computer Vision, NLP
Data Science: EDA, NumPy, Pandas, Matplotlib, Seaborn
Web / Backend: Node.js, Flask, React.js, REST APIs
Databases / Tools: PostgreSQL, MySQL, Git, GitHub, Docker

EXPERIENCE

Hire CirKit <i>Full Stack Developer Intern</i>	Remote Jun 2026 – Present
Scalable System Design: Architect and implement frontend and backend components for production-grade web systems using React, Node.js, and REST APIs, supporting real-world product environments with a focus on scalability and responsiveness Data-Driven Feature Development: Develop and integrate API-driven pipelines that ingest and surface structured data to end users, applying feature engineering principles to transform raw inputs into actionable product outputs Ownership & Delivery: Drive end-to-end delivery of assigned product features within agreed timelines, maintaining 100% on-time task completion across a flexible 40–50 hours/week engagement	

PROJECTS

AEGIS EYE Real-Time Computer Vision Pipeline & Edge Computing <i>Deep Learning, Computer Vision, IoT, Edge AI</i>	Source Code
Supervised Detection Pipeline: Trained a YOLO-based supervised object detection model for real-time human detection, achieving ~85% accuracy with evaluated precision/recall tradeoffs across disaster scenario test sets; integrated TensorFlow classification models for flood and landslide prediction to support rescue prioritization Feature Engineering & Edge Inference: Engineered multi-modal input features from 4+ sensors (camera, GPS, thermal, LiDAR) on ESP32-CAM edge hardware; applied data preprocessing and augmentation pipelines to improve model generalization under low-visibility conditions Model Evaluation: Benchmarked detection performance against baseline frame-differencing methods; optimized inference latency for real-time edge deployment, reducing decision lag for rescue prioritization workflows	
Crop Health Prediction using Remote Sensing Data <i>Deep Learning, Geospatial ML, Feature Engineering</i>	Source Code
Supervised Deep Learning Model: Designed and trained a CNN-based supervised regression and classification model using TensorFlow/Keras to predict crop health categories from multi-band geospatial imagery; applied cross-validation and tuned hyperparameters (learning rate, batch size, dropout) to reduce overfitting on limited labeled samples Geospatial Feature Engineering: Constructed a structured feature engineering pipeline over 1000+ raster samples, extracting NDVI, thermal, and DEM bands using rasterio and geopandas; normalized and transformed multi-band inputs to align with model training requirements, reducing manual preprocessing effort by ~30% Evaluation & Benchmarking: Evaluated model performance using F1 score, precision/recall, and confusion matrix across crop-health classes; compared against classical baselines (SVM, Random Forest) to validate deep learning uplift	
AI Resume Analyzer & Job Match Platform <i>NLP, Machine Learning, Full-Stack Development</i>	Source Code
NLP & Semantic Matching Engine: Built a supervised text classification and semantic similarity pipeline to match resumes against job descriptions, achieving 80%+ matching accuracy; applied feature extraction techniques (TF-IDF, semantic embeddings) and evaluated performance using precision, recall, and F1 metrics ML System Design: Integrated OpenAI and Gemini APIs for skill extraction and gap recommendations; designed a scalable inference pipeline using React, Node.js, and PostgreSQL, enabling real-time job-fit scoring and actionable upskilling feedback for end users	

ACHIEVEMENTS & CERTIFICATIONS

Selected among Top 50 out of 1450+ teams in GRAPH-A-THON 3.0 , a national-level hackathon
Completed Be10X AI & ChatGPT Workshop , gaining hands-on experience in AI tools, prompt engineering, and real-world automation workflows
Certifications: HCL – Build & Deploy Apps with Google AI Studio; AWS – Cloud Quest (Machine Learning)
